Abhik Das

Final Year Student in Computer Science and Engineering

+91-9096563257 | abhikdas0811@gmail.com | Hyderabad, India - 500084 | LinkedIn | GitHub | Portfolio

Summary

Aspiring Computer Science Engineering student in the final year, with a strong interest in software development. Passionate about applying technical skills to real-world projects while continuously learning emerging technologies to create meaningful impact.

Skills

- **Languages:** Java, Python, MySQL, MongoDB, HTML, CSS
- **Developer Tools:** GitHub, Git, Postman API, Vercel, Wireshark, Canva, MS Office
- **Libraries and Frameworks:** Pandas, Numpy, Scikit-Learn, Matplotlib, Seaborn, Folium, React, Express, Node, Bootstrap
- **Software Development**
- **Web Development**
- **Data Analysis**

Education

VIT-AP University | 2022-2026
Bachelor of Technology in Computer Science and Engineering
- Current CGPA: **8.88**

Abhinav English School | 2022
Higher Secondary Education | CBSE
- Percentage: **87%**

Bishop's Co-ed School | 2020
Secondary Education | ICSE
- Percentage: **96%**

Projects

- **Wireshark Network Tracing with Google Maps** – A Network threat visualization tool that tracks IP addresses extracted from Wireshark packet captures (CSV format) and plots their geolocation data on an interactive map. It enables IP threat detection via external APIs and provides an analytics dashboard for threat intelligence.
  Technologies used: Wireshark, Folium, Pandas, Matplotlib, APIs - AbuseIPDB, VirusTotal
- **Employee Management System** – A Comprehensive application designed to streamline employee and HR management processes using SDLC principles. Reduced manual HR workload by automating core operations using structured workflows.
  Technologies used: Java Swing, MySQL
- **Hotel Booking System** – A full-stack application built using the MERN stack, providing CRUD functionalities in hotel room bookings with a user-friendly interface. Streamlined booking flow and improved user experience through responsive UI.
  Technologies used: React.js & Bootstrap (Frontend), Node.js & Express.js (Backend), and MongoDB (Database)
- **Spotify Exploratory Data Analysis** – A Data analysis project to uncover insights into music consumption and user behavior using Spotify's dataset. Identified feature patterns influencing popularity and created visual insights for music analytics.
  Technologies used: Python Pandas, Numpy, Matplotlib, Seaborn

Research Work

Healthcare Analytics: Data Mining Techniques on Electronic Health Records (EHR) to Build a Predictive Model for Early Disease Diagnosis | Author and Presenter | International Conference on Sustainable Communication Networks and Application (ICSCN 2025), IEEE ComSoc | October, 2025

- Designed a hybrid ensemble that adapts model weights per disease instead of using a single global meta-learner.
- Balanced sensitivity and specificity using disease-specific threshold tuning to reduce false positives in diagnosis.
- Built a unified framework capable of predicting multiple diseases from heterogeneous EHR datasets.
- Improved reliability of predictions through probability calibration using isotonic regression.

Certifications

- MongoDB Associate Database Administrator (MongoDB) - Nov 2025
- MERN Full Stack Certification Program (Ethnus) - Aug 2024
- Cybersecurity Essentials (Cisco Networking Academy) - May 2024

Activities

- **ByteBattles: Interclub Code Clash (Jan 2024) –** Participated in coding contest organized by Machine Learning Club.
- **Geekathon 1.0 (Oct 2023) –** Built a Travel Planner website (HTML, CSS, JS) during a 24-hour hackathon at VIT-AP.
- **Technical Team Member, GFG Student Chapter VIT-AP (Aug 2023 – Aug 2025) –** Contributed to technical events and discussions.
- **SPM Web Member, CSI VIT-AP Chapter (Sep 2022 – Jun 2023) –** Worked on web projects and technical sessions.
