Abhik Das

Final Year Student in Computer Science and Engineering

+91-9096563257 | abhikdas0811@gmail.com | Hyderabad, India - 500084 | LinkedIn | GitHub | Portfolio

Summary

Final year Computer Science student with experience in enterprise full-stack development, data analytics and cybersecurity. Proficient in NestJS, Angular, Python, and MongoDB through internship experience, research work, and software development projects..

Skills

- **Languages:** Java, Python, TypeScript, HTML, CSS
- **Databases:** MongoDB, MySQL
- **Libraries and Frameworks:** NestJS, Angular, React, Node.js, Express.js, Pandas, Numpy, Scikit-Learn, Matplotlib, Seaborn, Folium, Bootstrap
- **Developer Tools:** Docker, Git, GitHub, GitLab, Postman, Vercel, Wireshark

Experience

Collins Aerospace — Product Intern
Jan 2026 – Jun 2026 | Hyderabad, India

• Worked on Project AURA in a full-stack development role using Angular, NestJS, and TypeScript.
• Contributed to frontend feature enhancements, backend API integration as well as database optimization.
• Gained hands-on experience with Docker-based development workflows and debugging processes
• Collaborated with developers using Git-based version control and Agile development practices

Projects

- **Wireshark Network Tracing with Google Maps** – A Network threat visualization tool that tracks IP addresses extracted from Wireshark packet captures (CSV format) and plots their geolocation data on an interactive map. It enables IP threat detection via external APIs and provides an analytics dashboard for threat intelligence.
  Technologies used: Wireshark, Folium, Pandas, Matplotlib, APIs - AbuseIPDB, VirusTotal

- **Employee Management System** – A Comprehensive application designed to streamline employee and HR management processes using SDLC principles. Reduced manual HR workload by automating core operations using structured workflows.
  Technologies used: Java Swing, MySQL

- **Hotel Booking System** – A full-stack application built using the MERN stack, providing CRUD functionalities in hotel room bookings with a user-friendly interface. Streamlined booking flow and improved user experience through responsive UI.
  Technologies used: React.js & Bootstrap (Frontend), Node.js & Express.js (Backend), and MongoDB (Database)

- **Spotify Exploratory Data Analysis** – A Data analysis project to uncover insights into music consumption and user behavior using Spotify's dataset. Identified feature patterns influencing popularity and created visual insights for music analytics.
  Technologies used: Python Pandas, Numpy, Matplotlib, Seaborn

Education

VIT-AP University | 2022-2026
Bachelor of Technology in Computer Science and Engineering
- CGPA: **8.93**

Abhinav English School | 2022
Higher Secondary Education | CBSE
- Percentage: **87%**

Bishop's Co-ed School | 2020
Secondary Education | ICSE
- Percentage: **96%**

Research Work

Healthcare Analytics: Data Mining Techniques on Electronic Health Records (EHR) to Build a Predictive Model for Early Disease Diagnosis | Author and Presenter | International Conference on Sustainable Communication Networks and Application (ICSCN 2025), IEEE ComSoc | October, 2025

- Designed a hybrid ensemble that adapts model weights per disease instead of using a single global meta-learner.
- Balanced sensitivity and specificity using disease-specific threshold tuning to reduce false positives in diagnosis.
- Built a unified framework capable of predicting multiple diseases from heterogeneous EHR datasets.
- Improved reliability of predictions through probability calibration using isotonic regression.

Certifications

- Docker Foundations Professional Certificate (Docker) - May 2026
- MongoDB Associate Database Administrator (MongoDB) - Nov 2025
- MERN Full Stack Certification Program (Ethnus) - Aug 2024
- Cybersecurity Essentials (Cisco Networking Academy) - May 2024
